## Alert Plus™ Waste Compactor Remote Alarms and Diagnostics

product summary

ALERTS YOU  
TO COMPACTOR  
PROBLEMS  
BEFORE THEY  
BECOME  
EXPENSIVE  
SERVICE CALLS.

The Alert Plus™ System Option implements automated remote diagnostics to reduce compactor downtime and unnecessary field service calls. Up to four selectable compactor inputs are monitored.

When a problem is detected, the system automatically sends real-time notification of the problem to designated recipients. A problem, that would be as simple to correct as resetting an Emergency-Stop Button can generate unnecessary expensive service calls. Alert Plus prevents this expense by automatically sending alarm notifications, such as: emergency-stop button activation, overload trip, hopper door left open and container not returned. A low-oil alert can prevent a serious problem from occurring. With this additional information, waste compactor users can easily correct many problems without the need for a field service call.

### Features / Benefits

- + The Monitor will send an email or text message directly to your cell phone or computer when help is needed
- + Reduces compactor downtime and expensive field service calls
- + Provides remote diagnostics to identify the alarm conditions and to prevent many maintenance-related problems from occurring
- + Many field service calls address problems that the compactor user could have corrected if the nature of the problem was known
- + An additional capability allows remote deactivation of a compactor, as required, to maintain safety or in response to unpaid service fees
- + Alert Plus more than pays for itself in savings from unneeded service calls and compactor downtime
- + Advises when the problem has been resolved

The Alert Plus is now available for all existing Wireless Waste Edge® Compactor Monitoring Systems. Once Alert Plus hardware has been installed, operation is fully automated.

Waste Edge is the world's most popular remote waste compactor management system.
